IN THE CLAIMS

Please amend the claims as follows:

Claims 1-36 (Canceled).

Claim 37 (New): An insert configured to cooperate in a plate made of a brittle material of glass type, to allow, in cooperation with a connecting element, the plate to be mounted on a support, wherein the insert is configured to be received or formed in situ in a hole having retaining walls of curved profile and to be self-locking in the hole, the hole being made in one face of the plate, the insert being obtained from at least one removable component made of a deformable material.

Claim 38 (New): The insert as claimed in claim 37, wherein the hole is bounded by a side wall of concave profile, the concavity being turned toward the inside.

Claim 39 (New): The insert as claimed in claim 37, wherein the hole is a blind hole or a through-hole.

Claim 40 (New): The insert as claimed in claim 37, wherein the hole has a circular or oblong cross section.

Claim 41 (New): The insert as claimed in claim 37, based on a cup-shaped element configured to be introduced into the corresponding hole in the plate, the cup having radial slots made in its side wall, thus forming petals configured to bend elastically or plastically inward to allow the element to be fitted into the corresponding hole in the plate, the internal

surface of the side wall of the cup-shaped element being configured to corporate with the element for connecting the glass plate to the support.

Claim 42 (New): The insert as claimed in claim 41, wherein the cup-shaped element is of circular shape.

Claim 43 (New): The insert as claimed in claim 41, wherein the cup-shaped element includes three to five slots.

Claim 44 (New): The insert as claimed in claim 39, wherein the element has a curved bottom or a curved pierced bottom.

Claim 45 (New): The insert as claimed in claim 37, wherein the cooperation between the connecting element and the insert is configured for self-locking the insert within the hole.

Claim 46 (New): The insert as claimed in claim 37, wherein a wetting agent for improving surface appearance is interposed at an interface between the side wall of the hole and the insert.

Claim 47 (New): A plate, made of a brittle material of the glass type, including on at least one of its surfaces a hole configured to receive at least one insert as defined in claim 37.

Claim 48 (New): The plate as claimed in claim 47, equipped with the at least one insert.

Claim 49 (New): The glass plate as claimed in claim 48, wherein each insert has received a connecting element configured to cooperate with a support.

Claim 50 (New): The plate as claimed in claim 47, wherein the glass is toughened, tempered, annealed, or mechanically reinforced glass.

Claim 51 (New): A mounted assembly or assembly to be mounted, comprising at least one plate as defined in claim 47.

Claim 52 (New): The assembly as claimed in claim 51, including a wall cladding element, an interior furnishing, a partition, or a piece of furniture.

Claim 53 (New): A heating element comprising a plate as defined in claim 47 configured to be provided with at least one of conducting elements, screen-printed elements, and with current leads.

Claim 54 (New): A process for manufacturing a plate configured to be mounted on a support to constitute a mounted assembly, wherein a surface of the plate, made of a brittle material of the glass type that has not undergone a heat treatment, is machined to make at least one hole at a place of fastening points, each hole being shaped to allow an insert as defined in claim 37 to be introduced and retained, wherein a heat treatment is then carried out on the plate, and an insert of complementary shape as defined is placed or formed in situ in each of the holes.
